Hiring Manager
RepairDesk
Remote

RE: Software Developer Position

Dear Hiring Manager,

I'm writing to apply for the Software Developer role at RepairDesk. With 4+ years of experience building scalable SaaS platforms—including multi-tenant repair and maintenance systems—I bring the full-stack expertise and product focus needed to help 3,000+ repair businesses worldwide run more efficiently.

Why I'm a strong fit:

Full-stack alignment with your stack. I work daily with **Node.js, TypeScript, Vue.js, and MySQL**—exactly what you've listed. At OnStak, I led backend development for a Video AI platform using Node.js/Express with PostgreSQL, and I've built real-time analytics systems handling 50,000+ daily transactions. I'm comfortable across the entire stack, from REST API design to frontend integration.

SaaS + multi-tenant experience. I've architected secure, multi-tenant systems with row-level isolation and RBAC for enterprise clients. I understand the complexity of serving diverse business sizes—from single stores to franchises—with customizable workflows and 30+ integrations. This directly translates to RepairDesk's repair shop verticals.

Performance optimization + legacy modernization. I improved query performance by 40% through indexing and optimization, implemented caching layers reducing database load by 25%, and migrated legacy systems to modern stacks (zero-downtime PostgreSQL migration, 80% reduction in manual deployment effort). I can optimize your legacy algorithms and scale systems for 3,000+ global customers.

AI-assisted development. I'm already leveraging AI tools for code generation, refactoring, and productivity gains—while maintaining security and cost awareness. I can help your team adopt these practices responsibly.

Quality + collaboration. I write comprehensive test cases, participate in code reviews, and have led cross-functional teams. I've mentored junior engineers and consistently deliver clean, maintainable code under deadline pressure.

What draws me to RepairDesk:

I want to build software that solves real business problems. RepairDesk's impact—helping thousands of repair shops save time, manage inventory, and stay profitable—is exactly the kind of

meaningful product work I seek. I'm excited by the scale (30+ languages, 40+ integrations) and the opportunity to optimize systems used globally.

I'm fully equipped for remote work, comfortable with AWS and CI/CD pipelines, and ready to contribute immediately to your Node.js/Vue.js/MySQL stack.

Thank you for considering my application. I'd welcome the opportunity to discuss how my SaaS experience, full-stack skills, and product focus can help RepairDesk serve its global repair business community even better.

Best regards,

Hamza Butt
